

HRMS Portal — Administrator & User Guide

Everything a Super Admin, HR Manager, Manager, or Employee needs to run day-to-day HR operations in the HRMS Portal — attendance, leave, employee records, announcements, and geofenced office locations — plus a step-by-step checklist for configuring the portal from scratch for a new organization.

Covers Employees · Attendance & Geofencing · Leave · Announcements · Organization & Admin

Roles documented 5

01 — START HERE

What HRMS Portal does

HRMS Portal is a single system of record for an organization's people operations: who works there, where they're supposed to be, when they were in, and how much leave they have left. It replaces spreadsheets and one-off approval emails with one login that adapts to who's using it — an employee sees their own attendance and leave; a manager also sees approvals; HR and Super Admin also see company-wide configuration.

Five building blocks run through the whole system:

- **Organization structure** — companies, branches, departments, and designations that every employee record hangs off of.
- **Employees** — the people directory, org chart, and each person's own self-service profile.
- **Attendance** — punch in/out, optionally validated against a geofenced office, client site, or work-from-home/field assignment, with a regularization workflow for anything that needs correcting after the fact.
- **Leave** — leave types with annual allocations, applications, and approvals, with real-time balance tracking that accounts for days already taken and days still pending.
- **Announcements** — company-wide notices with a read/unread indicator and a notification badge, so nothing important gets missed.

02 — ACCESS CONTROL

Roles & what each one can do

Every login is assigned exactly one role. The role determines both the sidebar menu shown and what each screen lets you do — the same URL can render a read-only view for one role and a full editor for another.

Super Admin — everything, unconditionally

HR Manager — people ops + company-wide config

Management — oversight + company-wide approvals

Dept Manager — approvals for their own direct reports

Employee — their own attendance, leave & profile

✓ full access **Own reports** only requests where you're the assigned manager

Company-wide can act as fallback approver on any pending request, even if not the assigned manager

— not available

Why "company-wide" approval exists. Every leave and attendance-regularization request is routed to the employee's reporting manager first. HR Manager, Management, and Super Admin can also step in and decide any pending request — so nothing gets stuck if a manager is unavailable. A Dept Manager only sees and decides requests where they are the actual assigned approver.

03 — FIRST LOOK

Getting started

Sign in with the username and password issued by HR. Every account's home base is the same shell — a left sidebar built from your role's menu, and a top bar that's identical for everyone.

Sign-in screen. Usernames are either an official email (for HR-created logins) or a short username for the built-in demo/system accounts.

The top bar, left to right

- **Search** — quick lookup across employees and requests.
- **Theme toggle** — switch between light and dark mode.
- **Notification bell** — badges the number of unread Announcements; click it to jump straight to your Announcements feed.
- **Settings** — takes Super Admin/HR/Management-with-admin-rights to system settings, everyone else to their own My Profile.
- **Avatar menu** — My Profile and Logout.

Default password for HR-created logins is `Test@123` . The username is the employee's official email address, so it can never collide with another employee. New hires should change their password from My Profile the first time they sign in.

User manual

One walkthrough per module. Each one notes who can reach it before diving into the how-to.

Dashboard

Everyone, scoped to their role

The landing page after login. An employee sees their own attendance/leave snapshot; a manager or HR additionally sees team-wide headcount, a department breakdown, a 7-day attendance trend, a pending-approvals queue, and a recent-activity feed so they can act without hunting for the right screen.

HR Manager's dashboard: headcount stat cards, department distribution, attendance trend, pending approvals and recent activity all in one place.

Employee management

HR Manager, Super Admin manage · Management & Dept Manager view

The Employee Directory is the master list of everyone in the company, with search and filters by department, designation, and status. HR-restricted branches only see employees in their own branch.

Add employee

Employee Directory — search, filter, and jump into any employee's record or login management.

Adding a new employee

- From the Directory, click **Add Employee**.
- Fill in personal, employment, and reporting-manager details. The **employee code** (e.g. EMP0011) is generated automatically — there's nothing to type.
- Save. The employee now appears in the Directory and Employee Tree, but has no login yet.
- Open the new employee's record and choose **Create login** to issue portal access — pick a role (Super Admin can only be granted by another Super Admin), and the

system sets the username to their official email with the default password

Test@123 .

Attendance

Everyone punches in/out · HR/Management/Dept Manager approve

Punch In/Out captures the browser's GPS location (with accuracy in metres) and checks it against whatever the employee is assigned to — a specific office and radius, a client site, or an unrestricted Work-From-Home/Field assignment. A rejected punch shows both the target location's coordinates and the employee's reported coordinates, so it's clear exactly why it was rejected.

Punch In/Out — detects location automatically before enabling the punch button.

Fixing a missed or wrong punch: Regularization

If a day has no punch at all, or the times are wrong, the employee raises a regularization request with a corrected check-in/check-out and a reason. It's routed to their reporting manager, with HR/Management able to step in if the manager hasn't acted. The system blocks a second request for the same date while one is already pending or approved.

Leave

Everyone applies · HR/Management/Dept Manager approve · HR configures types

Every leave type (Casual, Sick, Earned, or whatever HR configures) carries its own annual allocation. The Apply form shows real-time **Available** and **Pending** days for whichever leave type is selected — available already accounts for anything still awaiting approval, so an employee can't accidentally over-apply.

Announcements

Everyone reads · HR/Management publish

A company-wide notice board. HR or Management drafts an announcement with a priority (Normal / Important / Urgent), a publish date, an optional expiry date, and an optional attachment — either an uploaded file (PDF, image, or document, served back from the portal) or a plain link. Nothing shows to employees until its status is switched to **Published** and its publish date has arrived.

Locations & geofencing

HR Manager, Super Admin

This is what makes Punch In/Out location-aware. An **Office** has a company, an address, a map-picked centre point, and a radius in metres — anyone punching in from inside that radius is accepted; outside it, rejected with the distance shown. **Client Locations** work the same way for staff who work at a client's site. Every employee is then linked to one or more of these (or marked Work-From-Home / Field, which skips geofence checking entirely) via **Employee Location Assignments**.

Users — every login account, its role, and its lock status.

Roles — edit which permissions and menu items each role gets.

05 — ONBOARDING A NEW ORGANIZATION

Setting up HRMS Portal from scratch

Do these in order — each step depends on the one before it. Everything here is done as Super Admin (or HR Manager, once a company and at least one HR login exist).

1 Create the Company

Organization → Companies → Add. This is the top-level tenant every branch, department, employee, leave type, and office hangs off of. Most single-entity organizations only ever need one.

2 Create Branches

Organization → Branches → Add, one per physical location the company operates from. HR Manager access can later be restricted to a specific branch if the organization wants branch-scoped HR.

3

Create Departments & Designations

Organization → Departments and → Designations. These populate the dropdowns used everywhere an employee record is created or edited.

4

Review roles & permissions

The five roles (Super Admin, HR Manager, Management, Dept Manager, Employee) and their permissions ship pre-configured — see the matrix above. Only adjust Administration → Roles if this organization needs a genuinely different access model.

5

Configure Leave Types

Leave → Leave Types → Add, one per category the organization grants (Casual, Sick, Earned, etc.), each with its own annual allocation and carry-forward limit. Every existing employee gets a balance row for the current year automatically the first time it's needed.

6

Configure Offices (if using geofenced attendance)

Locations → Offices → Add office, one per site, using the map picker to set the exact centre point and a sensible radius (50–150m for a single building is typical). Skip this step entirely if the organization doesn't want location-validated punches.

7

Configure Client Locations (if staff work on-site at clients)

Locations → Client Locations → Add, same geofence model as an office.

8

Add Employees

Employee Management → Add Employee for each person, setting their department, designation, branch, and reporting manager. Employee codes are generated automatically. Get the reporting-manager chain right here — it drives every leave and regularization approval.

9

Create logins

From each employee's record, Create login — pick their role. Username is their official email; default password is `Test@123`. Only a Super Admin can grant the Super Admin role.

10

Assign employees to locations

Locations → Employee Location Assignments — link each employee to their office/zone or client site, or mark them Work-From-Home/Field. Anyone left unassigned can still punch in from anywhere, unchecked.

11

Publish a welcome announcement

Announcements → Manage Announcements → Add announcement. A short welcome/holiday-calendar notice is a good way to confirm the whole publish → feed → notification-badge path works end to end before rolling out to everyone.

12

Verify with a real employee login

Log in as one of the freshly created employees and confirm: Dashboard loads, Punch In/Out resolves their assigned location correctly, Apply Leave shows the right balances, and the welcome announcement appears unread with the bell badge showing "1".

06 — APPENDIX

Reference

Permission codes

Every screen and API action is gated by a permission code, grouped by module.
Administration → Roles is where these are assigned to roles.

MODULE	CODES
Dashboard	DASHBOARD_VIEW
Employees	EMPLOYEE_VIEW, EMPLOYEE_ADD, EMPLOYEE_EDIT, EMPLOYEE_DELETE, EMPLOYEE_EXPORT
Attendance	ATTENDANCE_VIEW, ATTENDANCE_APPROVE, ATTENDANCE_REGULARIZE
Leave	LEAVE_APPLY, LEAVE_VIEW, LEAVE_APPROVE, LEAVE_TYPE_MANAGE
Announcements	ANNOUNCEMENT_VIEW, ANNOUNCEMENT_MANAGE
Locations	LOCATION_VIEW, LOCATION_MANAGE
Organization	ORG_VIEW, ORG_MANAGE
Administration	USER_MANAGE, ROLE_MANAGE, MENU_MANAGE, AUDIT_VIEW

Demo accounts (this environment only)

Seeded for testing — for a real deployment, delete or repurpose these before go-live.

USERNAME	ROLE	PASSWORD
superadmin	Super Admin	Hrms@123
hrmanager	HR Manager	Hrms@123
management	Management	Hrms@123
deptmanager	Dept Manager	Hrms@123
employee	Employee	Hrms@123

HRMS Portal Guide — captured from a running instance of the portal. Screens reflect the roles and permissions configured at capture time and may differ if your organization customizes Administration → Roles.
